Aim IT

Capability statement

Complete Forex brokerage and ISP solutions

Your Success Is Our Success.

Aim IT is a technology company founded in 2018, based in Dubai and working with businesses worldwide. We build software, run the infrastructure under it, and maintain our own platforms. Most of our attention goes to two industries, because both reward knowing the operation rather than only the technology: Forex brokerages and financial technology companies, and Internet service providers.

Adoption

End users	More than 300,000 people use platforms powered by Aim IT.
ISPs	More than 100 Internet service providers run our platform on a subscription.

Company

Founded	2018
Base	MSH Building, M Floor, Port Saeed, City Center, Dubai, UAE
Market	International

Our own products

Every product is available on a subscription and as a white-label solution under your own brand. Custom development follows the platform where an operation needs something beyond it.

ounts, onboarding, documents, partners, approvals, reporting, roles and permissions. Available.

atform. Android, iOS, Windows, macOS and web; all order types; automated trading; broker and server selection built in, so it can be branded and license

ages, billing, RADIUS, payments, network, monitoring and reporting in one system. Available. Used by more than 100 ISPs.

What we do

erage technology	Brokerage CRM, client management, back office, onboarding and document workflow, partner management, trading technology, repor
echnology	Subscriber and package management, billing and payments, RADIUS and router integration, customer portals, monitoring, reporting.
om software	Web and business applications, APIs, system integration, dashboards, CRM development, automation.

structure	VPS and dedicated servers, Linux, Docker, deployment, security hardening, monitoring, backup strategy with tested restores.
bases	Architecture, optimisation, migration, backup, security, scaling, data integration.

Technology and platform flexibility

Aim IT is not tied to any one platform. We work with whichever platforms, systems, APIs and infrastructure a project requires, and we will tell you exactly what we used whenever you ask.

	Trading interfaces, client portals, dashboards and admin screens, on every device and in your market's language.
	Accounts, records, money movement, permissions, reporting and the automation that keeps them in step.
cture	Servers, deployment, security hardening, monitoring and backups with tested restores.
on	Trading platforms, liquidity, payments, verification services and network equipment.
echnology	FIX API, MetaTrader 4 (MT4), MetaTrader 5 (MT5), the sTrader Trading Platform, liquidity provider integration, and Expert Advisors and aut

MetaTrader, MT4 and MT5 are trademarks of MetaQuotes Ltd. Aim IT is not affiliated with or endorsed by MetaQuotes.

Commercial models

- **Subscription** — use a platform as it is, with updates and support included.
- **Custom deployment** — the platform adjusted to your process and connected to your existing tools.
- **Enterprise deployment** — your own environment and infrastructure, with tighter control over access and data.
- **Custom development** — a system built from nothing, when no platform is the right starting point.

Pricing is quoted per project, because scope changes it completely.

How we work

Discover, plan, design, build, integrate, deploy, support, scale. The same eight steps on every project. Before a build starts we agree four things in writing: what is being built, who owns the code, roughly how long it takes, and what support looks like afterwards.

What we do not do

- We do not claim a feature that does not exist. Where a product is still in development, we say so, including on our own website.
- We do not publish uptime percentages, awards or testimonials that are not verified. The adoption figures above are our own and we stand behind them.
- We are a technology company. We do not provide financial services or investment advice, and we do not arrange licences or regulatory approval.
- We do not take a project we are wrong for. If your requirement sits outside what we do well, we will say so in the first conversation.
